

How to Measure FSS in CT?

CT User Group - October 2008

Amal Roche

The main application window has a blue background. At the bottom, there is a taskbar with several icons and labels: "New Patient", "Patient Schedule", "Patient Management", "Data Entry", "Event Mgmt", "Daily Prep", and "Scanner Utilities".

Attention

This table warning drive connection is not set up.
Please check your user and the correct user table warning is done.
Large font print will be used for all screens.

OK

The secondary application window shows a dashboard with various icons and a search bar. The search bar contains the text "Linq". Below the search bar, there is a date and time display: "8 October 1:54 PM". The dashboard includes several icons for different functions, such as "Patient Management", "Data Entry", "Event Mgmt", "Daily Prep", and "Scanner Utilities".

Attention

No tube warmup since 10/08/2008,11:14:03 AM
Small focal spot can not be used until tube warmup is done.
Large focal spot will be used for all exams.

OK

Description

CT Performix™ Ultra is designed using GE's revolutionary design for six sigma methodology to optimize overall tube performance while giving unprecedented tube life and reliability. Performix™ Ultra features significant design enhancements to support 0.5 second full scans for increased performance

Features

Higher Throughput

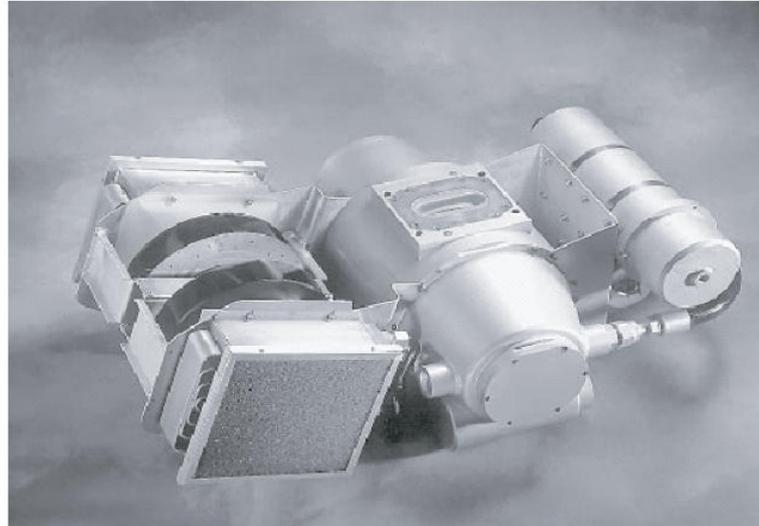

- 6.3 MHU 200mm target design eliminates tube cooling delays.
- Innovative thermal coatings and the unique metal ceramic insert combine with the high dissipation housing design to optimize patient throughput.

Imaging Performance

- Brazed graphite target design utilizing a patented braze process gives superior helical performance.

Reliability

- Innovative high capacity bearing and anode designs give outstanding reliability, even at the high g-loads associated with 0.5s gantry rotations speeds.
- Metal/ceramic frame significantly improves insert reliability for exceptional tube life.
- Patented high-voltage surge protection designed into the tube assembly provides exceptional high voltage stability.
- Each insert is conditioned up to 180 kVp which provides stability at the 140 kVp rating.

User Productivity

- Higher patient throughput obtained by optimizing the thermal design.
- High efficiency motor design provides fast access times.

Specifications

Tube Insert:

Dual Focal Spots:

- Small: 0.7 x 0.6
Large: 0.9 x 0.9
(IEC 336/93).
- Small: 0.9 mm (W) x 0.7 mm (L)
Large: 1.2 mm (W) x 1.2 mm (L)
(traditional methodology).

Stated values of length and width independently meet NEMA specifications.

Target Angle: 7°

8400 RPM minimum rotor speed.

Maximum target loading 53.2kW for 20 seconds.

Thermal Ratings:

Heat Storage Capacity:

Anode	6300 KHU
Housing	5500 KHU

Tube performance is never limited by the casing.

Heat Dissipation:

Anode: Maximum 840 KHU/min

Tube Assembly Continuous:
300 KHU/min

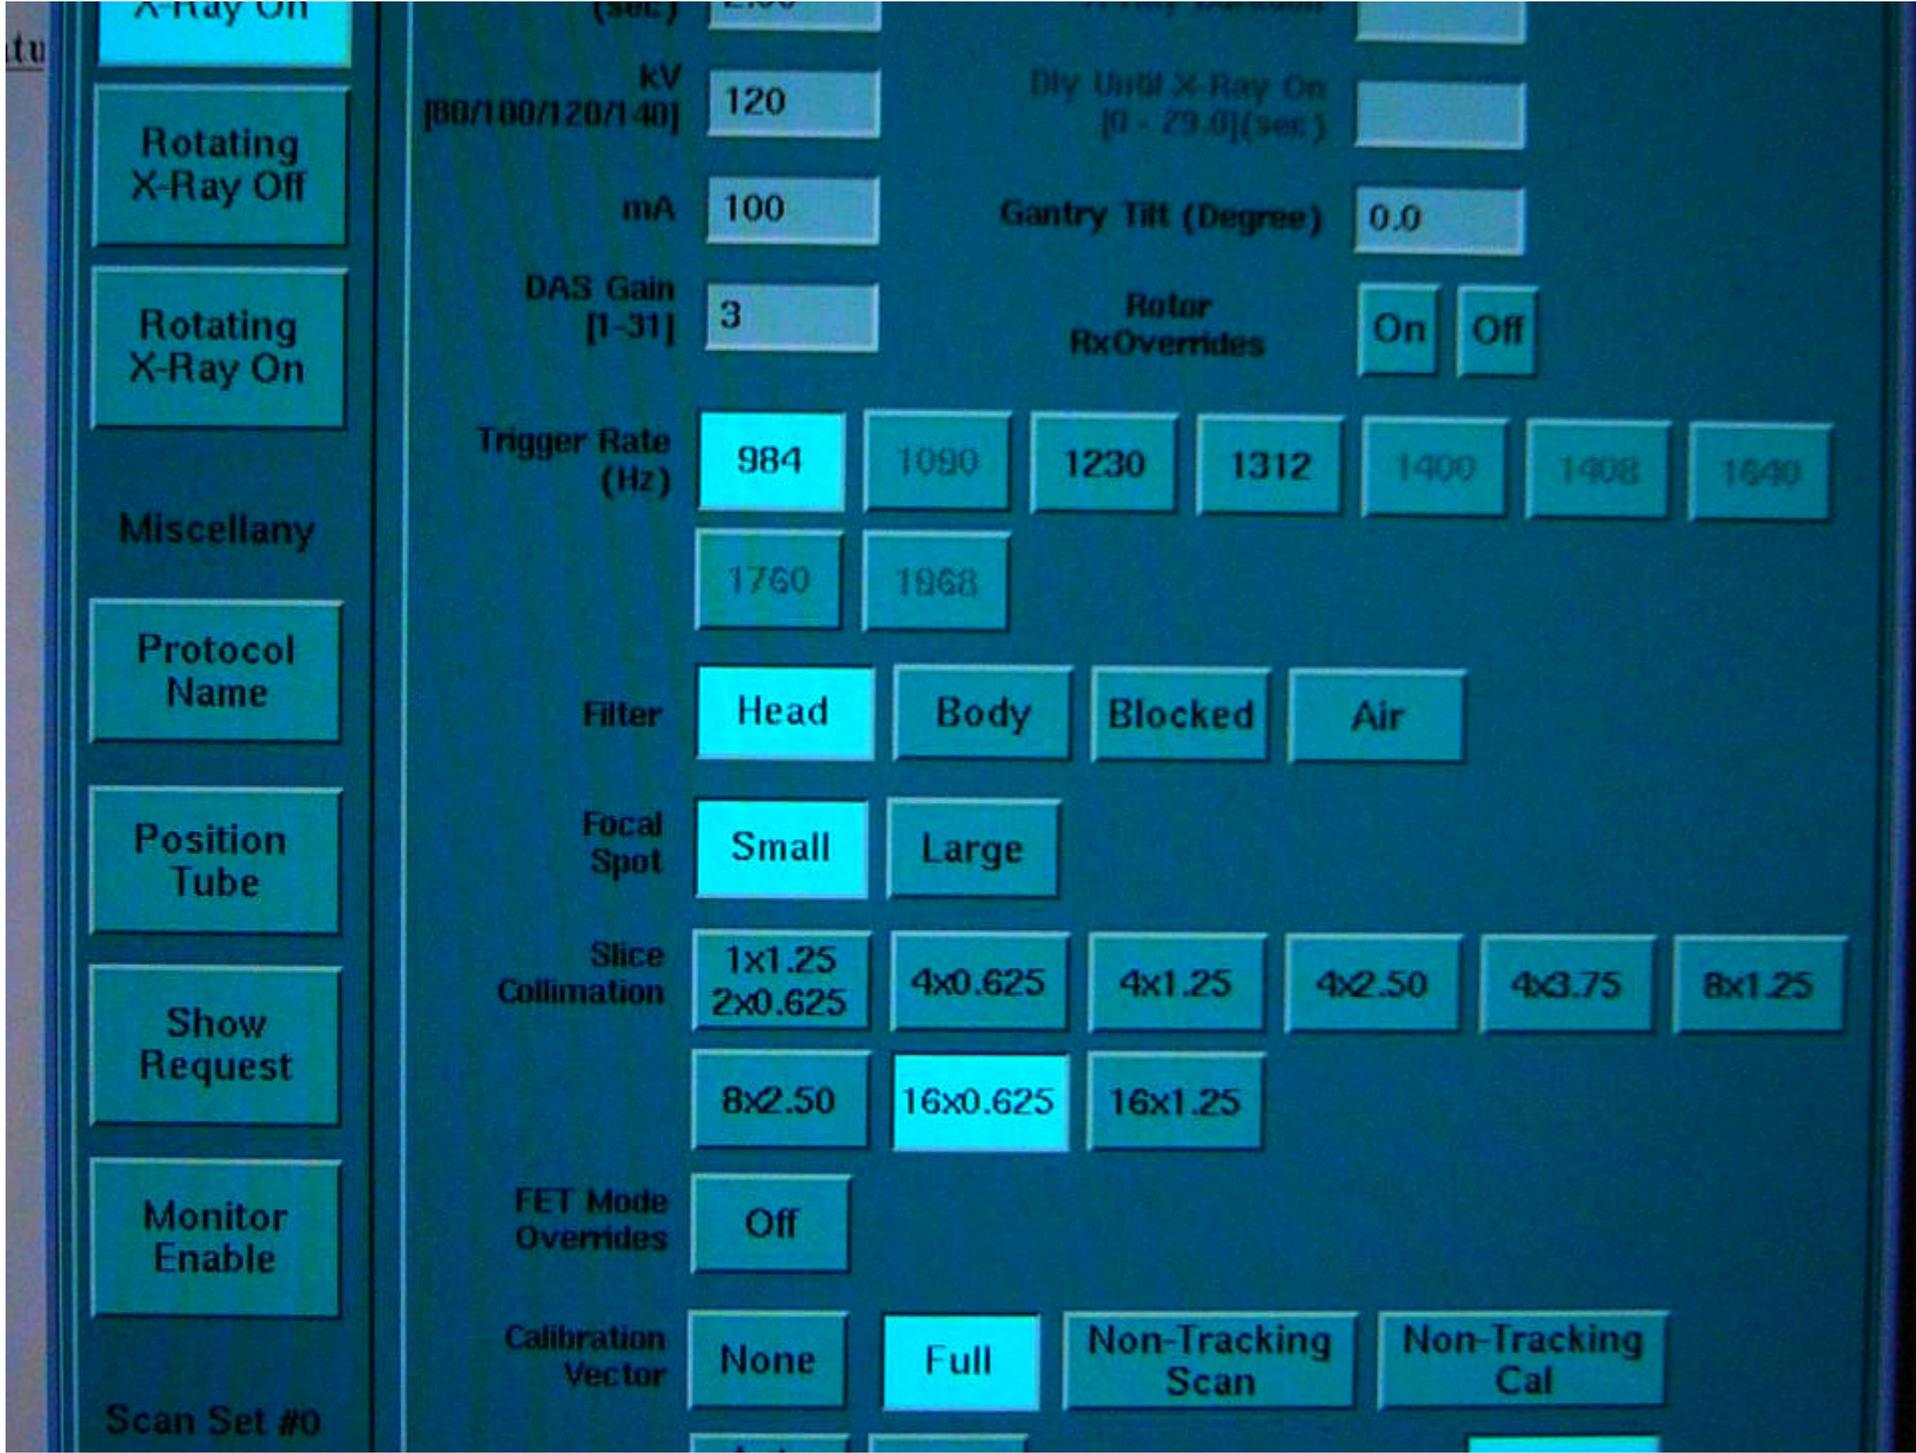

For three phase, twelve pulse equipment, heat units equal the product of the kVp x mAs in seconds x 1.35.

Tube Housing:

Shock-resistant housing constructed of aircraft grade aluminum. Lined with lead to minimize radiation leakage.

Heat exchangers and fans provide exceptional cooling at reduced noise levels.

Pressure switch mounted in tube housing automatically cuts off power to the tube assembly if oil pressure reaches a preset limit.
